

## Anti-Ram Secure - Elegant - Solid.

### Characteristics.

Designed to protect and secure open areas of land, garages, forecourts or caravan storage areas from unauthorised vehicle access or exit whilst retaining a clear view for viewing and open for pedestrian access.

The KSL Anti-Ram fence is cleverly designed to prevent ram raiding, stop un-authorised vehicular access, driving off of vehicles or by being of sufficient height to prevent motor bikes easily lifted over. Should the top rail be cut through, posts are set close together to act as bollards, normal cars cannot drive through the remaining gap and posts are also embedded deep enough so that they cannot be simply pushed over.

### Infill

Posts Ø89mm CHS standard set at 1.50m c/c with a Ø60.3mm rail positioned 500mm above ground.

### Access Points

You can secure your entrance with a tough but smart sliding gate with standard openings up 6.00m. This can be manual or automated. A sliding gate is ideal for small restricted areas or to maximise space.

Swing gates are also available but of course you can secure your entrance in a number of ways, barriers, bollards to rising kerb road blockers. Please do not hesitate to ask about the possibilities.

### Treatment

- (i) Hot dip galvanised.
- (i) Additional powder coating in standard RAL colour:
- (ii) Any RAL colour
